

Stubborn Rubber Hose Removal

Before

After

Penetrating Oil

Right angle pick & Groove joint plier

(Step-1)

To separate between rubber hose and metal joint stuck each other, try to make space all the way around rubber hose edge poking sharp tip deeply and apply leverage.

(Step-2)

Spray penetrating oil that regularly used for loosening metal nuts & bolts stuck, into the space to loosen the mutual adhesion.

(Step-3)

Slowly rotate rubber hose weakly nipping groove joint plier.

Especially, Step-2 is amazingly effective. After completion, do not forget wiping out the oil completely.
